- 14:00 h 16:00h

Description

Arrecife Energy Systems has developed an innovative wave energy converter that uses cross-flow turbines to convert both the potential and kinetic energy of waves into electricity in a simple process that imitates nature's coral reefs.

Major advantages of our system are

- · The ability to submerge the system in order to protect it in case of storms.
- The ability to navigate the system to port, simplifying maintenance and repair.
- The use of commercially available parts, lowering the overall cost.
- The absorption of both the potential and kinetic energy of the wave, resulting in a high production.
- The ability to easily combine the system with offshore wind farms, considerably reducing its costs. (5 systems/ wind turbine).

Our system has been successfully tested at 1/10 scale in laboratory conditions and is now looking for funding to test the system in sea conditions

Arrecife Wave Energy Converter

Arrecife Energy Systems has developed an innovative wave energy converter that uses cross-flow turbines to convert both the potential and kinetic energy of waves into electricity in a simple process that imitates nature's coral reefs.

Major advantages of our system are

· The ability to submerge the system in order to protect it in case of storms.

• The ability to navigate the system to port, simplifying maintenance and repair.

· The use of commercially available parts, lowering the overall cost.

• The absorption of both the potential and kinetic energy of the wave, resulting in a high production.

• The ability to easily combine the system with offshore wind farms, considerably reducing its costs. (5 systems/ wind turbine).

Our system has been successfully tested at 1/10 scale in laboratory conditions and is now looking for funding to test the system in sea conditions

Cooperation Offered

- 1. R&D Cooperation
- 2. Technical cooperation

Cooperation Requested

- 1. R&D Cooperation
- 2. Technical cooperation
- 3. Commercial cooperation
- 4. Other
